

Have user open Settings on their iPhone. They will see this screen.

Have them tap on Wi-Fi

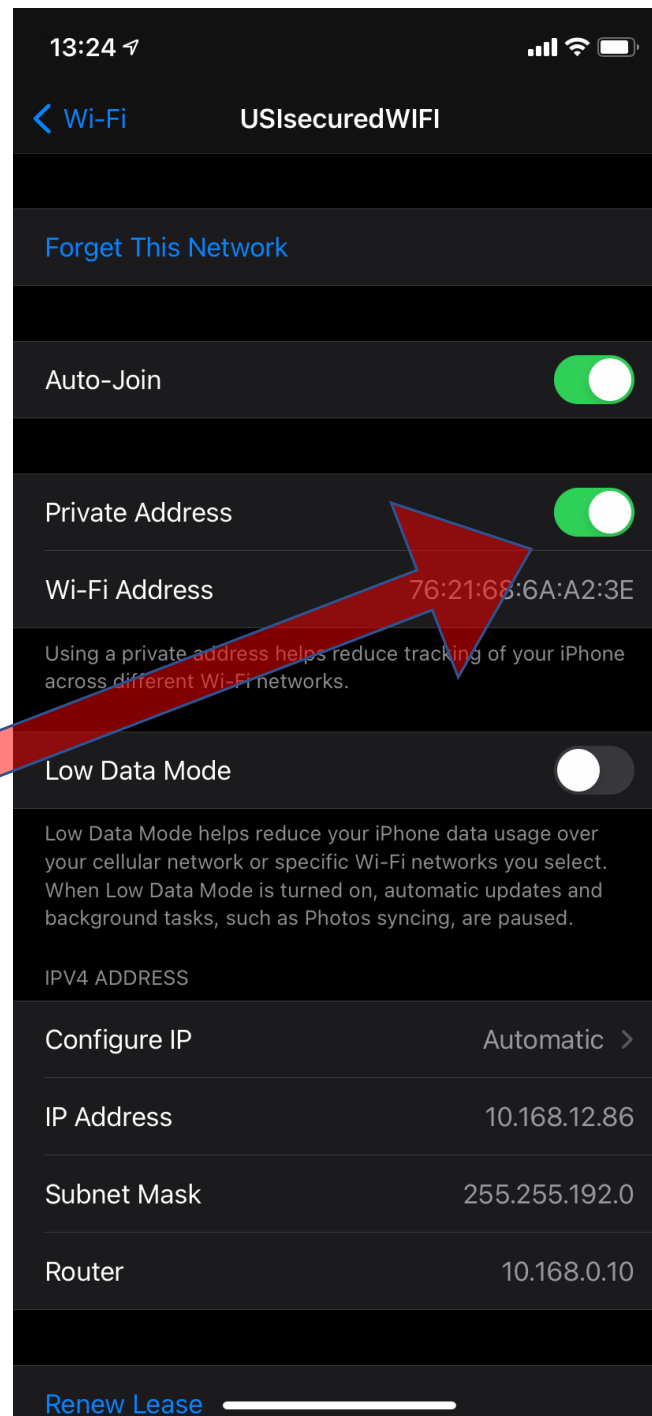

Have user tap
on the USI
Network they
have joined.

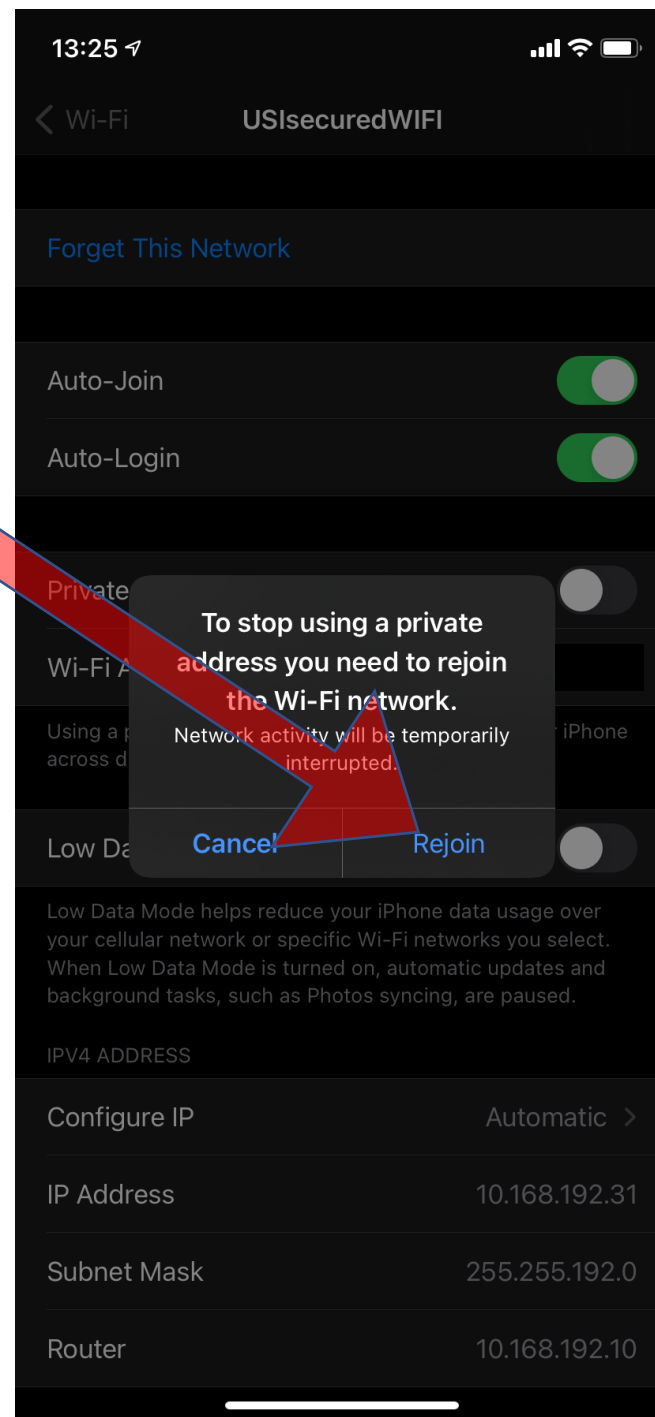

In this example
it is
USIsecuredWIFI.

Have the user tap on the green slider next to Private Address to turn it off.

Have user tap Rejoin to stop using a private address on this network.

Now they should be back on the Wi-Fi screen and confirm the Private Address is no longer green and turned off.
